- Verifiable history of professional success working with multiple clients in banking and e-commerce domain.
- In most recent role, I rewrote existing services, created new applications, tested and deployed the project.

## RELEVANT EXPERIENCE

### Software Developer at Mindgate Solutions, Mumbai.

April 2017 – April 2019

*Technologies Stack: Java, SQL, Spring MVC, JavaScript, jQuery, Rest & SOAP, JIRA, GitLab, Maven*

- Developed an enterprise web application Bharat Bill Payment System which offers real-time bill payment.
- Optimized the settlement and dispute module, it now handles 10X the volume in under 10% of previous time.
- Rewrote existing service in java that reduced development time by 30%; Replaced outdated VB webpages.
- Created two Java Cron Jobs (batch processing) to provide users with timely SMS and Email alerts.
- Created Dashboard and Report modules to provide client associates with real-time data about transactions
- Shared the code in the GitLab repository with team members and supervisors.
- Developed APIs to obtain real-time information such as account number, phone number, name, etc.
- Utilized JUnit and JMeter to effectively test the application before deploying it to DEV/QA/PROD.
- Completed design/wireframing for the application; liaised with stakeholders to discuss progress.
- Ensured adherence to company's technical standards; achieved successful implementation using Oracle SQL DB, Java (Spring MVC framework), JavaScript and jQuery (UI).
- Garnered advanced knowledge about technological infrastructure behind India's online payments system.

### Software Developer at Softservio Technologies, Pune.

Aug 2015 - March 2017

*Technologies Stack: Java, PL/SQL, Rest & SOAP, JIRA, Maven, JavaScript, JUnit, WebLogic, GitHub*

- Developed a web application known as WorkTradeMart which provides a multiple categories platform for both buyers and suppliers.
- Built a web application to facilitate users' ability to fetch, insert, edit, and delete records based on the firm's standards of Java development architecture.
- Enhanced application performance by over 70% that was developed in Java, Spring, Rest API.
- Built a user management module with LDAP integration which helps the user to access the portal with different roles and access rights.
- Executed domain modelling; created corresponding tables in Oracle SQL DB; authored stored procedures
- Interpreted functional service design documents to develop the services based on the requirements.
- Collaborated closely with the UI/UX, Business analyst team to conceptualize and implement wireframes into the user interface of the final product.

## RELEVANT PROJECT

### Movie Recommender System Database.

September 2019

- SQL implementation explaining the concepts of the recommender system.
- Developed collaborative filtering recommendation using cosine similarity-based metric to improve the results.

## SKILLS

*Languages: JAVA, C#, Spring MVC, ASP.NET, Rest & SOAP APIs, JavaScript, jQuery, Hibernate, JSON.*

*Databases: MySQL, Oracle SQL, SQL Serve.*

*Development Tools: JIRA, Microsoft Azure, GitLab, GitHub, JUnit, Web Logic, Linux, Apache Tomcat, Maven.*

*Quality Assurance: Test Cases Strategies & Coverages, System, Load, Regression & Negative Testing.*

## EDUCATION

### University of South Florida

Expected Graduation - Dec 2020

*M.S., Business Analytics / Information Systems*

### University of Mumbai

June 2011 - July 2015

*B.E., Electronics and Telecommunication*
